

THE PROBLEM

70% of livestock farmers use growth promoters (hormones, drugs and antibiotics) that generate:

- Toxic waste
- Bacterial resistance
- Affects animal welfare

Harmful effects on animal and human health

OUR SOLUTION

Innovative vaccines and immunotherapies as growth promoters

- ↑ Animal weight
- ↑ 20% muscle mass
- ↑ Meat quality

TRL4
Pre – Go to market

MARKET

Growth Promoters Market

FOUNDING TEAM

Partners and Founders: Those Who Plan and Manage

Antonio Enciso
Administrative Director

Rogelio Alonso
Scientific Director

Álvaro Aguilar
Legal Representative

R&D Laboratory Team: Those who produce and develop

Amanda Gayosso
Recombinant vector production

Vianey Ramírez
Production of recombinant immunogens

Pablo Pintor
Cell culture
Immunological assays
Quality control

The Advisors: Those who advise, accompany and qualify

Maria Salud Rubio
National expert in meat science

Salvador Romo
National Expert in Assisted Reproduction in Bovine Biology

INVESTMENT

Capital Raising

USD \$510,000

Financing the cash deficit for the growth plan for the next 18 months of operation.

Technological Development	(40%)
Field Validation Tests	(35%)
Product Certification - Intellectual Property Protection	(15%)
Operating expenses (OPEX)	(90%)
Investment Expenditures (CAPEX)	(10%)

In the next 18 months

- MILESTONE 1**
Optimized immunogen prototypes
- MILESTONE 2**
Field validation tests – dose – productive responses
- MILESTONE 3**
Product certification (SENASICA) – patent application
